## MAZAD

### Idea:

A platform combines some of companies or merchants who sell their product on auction.

### Main Scenario:

User explores some merchants 'products which are sold in some auctions, to join an auction you have to be registered in the platform.

If you managed to bid with **the highest price** during the **auction period**, you will be the winner of the auction and the merchant will get your contact data.

### Types of users and their authorities:

User	Actions
Admin	<ol style="list-style-type: none"><li>1. Accept company or merchant request to join platform.</li><li>2. Delete company or user.</li><li>3. Display company or user list.</li><li>4. Display Statistics of platform.</li><li>5. Delete auction.</li><li>6. Edit user authorities.</li></ol>

Company or Merchant	<ol style="list-style-type: none"> <li>1. Make registration request.</li> <li>2. Create auction and determine (price-period).</li> <li>3. Get contact data of the winner of Auction.</li> <li>4. Edit Profile</li> </ol>
Normal User	<ol style="list-style-type: none"> <li>1. Registration and Login.</li> <li>2. Bid for auction.</li> <li>3. Make interested auctions list.</li> <li>4. Display auctions which he succeeded to win.</li> <li>5. Edit profile</li> </ol>
